Face Beveled, Sand Blasted Artwork & Specialty Shaped Edge Work

Face Bevel Ordering Instructions and Policies

How to Order:

Order must specify:

- Specify right or left hand patterns when appropriate
- Pattern number
- The order must specify: POLISHED or GRIND V-bevel.
- Face bevels are available only in 10 mm V-bevel.

Finish Types:

Grind:

- V-bevel has a surface similar to a sandblasted texture, light gray in color, that obscures the V-bevel completely.

Polished:

- V-bevel's surface is polished to a smooth glass finish that is slightly optically distorted. The polished V-bevel will have minor striations along the V-bevel's long axis.

Limitations:

Configurations:

- Agalite Face Beveling is available in Estate, Euro and Accent Collections and glass only orders.

Glass Types:

- Agalite Face Beveling is not available in:
 - Krystal Flemish/Glacier, Krystal Textured Flutex, Krystal Rainglass
 - Flemish, Flash, Narrow Reed, Rainglass and Smooth Rough
- Please consult unit price lists or Glass Options charts for glass availability based on Collections.

Sizes:

- All designs may lose some geometric properties when programmed for non-standard sized doors or sidelight panels. All designs are drawn to scale on a 30" x 68" piece of glass.

Multi-Panel Units:

- Agalite has the ability to align face bevel designs between panels on simple multi-panel enclosures. Agalite retains the right to refuse offering this option when we foresee technical difficulties.

Edgework and Shape Polishing Policy

How to Order:

Specify options or submit patterns, templates and diagrams.

Finish Types:

Seamed: Normal broke-out edge with minimal sanding.

Grind: Consistent edge with sandblasted texture, may or may not have arrises.

Dull Polish: Consistent edge, made with 230 grit or better tool, will have arrise, satin finish.

Polished: Consistent edge, with arrise, high luster finish, may have striations parallel to the length of the polish.

Limitations:

Configurations: Agalite retains the right to refuse offering this option when we foresee technical difficulties.

Multi-Panel Units: Junctions between panel have a vertical match tolerance of 1/4".

Samples:

Glass Types: Samples are available per the discretion of Agalite Sales Managers.
